The Front-End Checklist

 \Box The Front-End Checklist Application is perfect for modern websites and meticulous developers! \bigstar Generated on http://frontendchecklist.io \bigstar

A newer version of the Front-End Checklist is currently in the works, **feel free to discuss** any feature you would like to see in the next version. Thank you for your support!

Project Name Page title or URL	 8/47 ✓ high priority 0/25 ✓ medium priority 0/16 ✓ low priority 	F
Developer's name or team	-	
HEAD 38 % Head items are ✓		
• Doctype: The Doctype is HTML5 and is at the top of all years.	our HTML pages.	
• Charset: The charset declared (UTF-8) is declared correct	ctly.	
• Viewport: The viewport is declared correctly.		
• V Title: A title is used on all pages		
• V Description: A meta description is provided, it is unique a	and doesn't possess more than 150 characters.	
• Favicons: Each favicon has been created and displays co	orrectly.	
• Apple Web App Meta: Apple meta-tags are present.		
• Windows Tiles: Windows tiles are present and linked.		
• Canonical: Use rel="canonical" to avoid duplicate content	t.	
 Language attribute: The <code>lang</code> attribute of current page. 	your website is specified and related to the language	e of the
• Direction attribute: The direction of lecture is specified o	n the html tag (It can be used on another HTML tag).	
• Alternate language: The language tag of your website is	specified and related to the language of the current $\boldsymbol{\mu}$	oage.
Conditional comments: Conditional comments are presented.	ent for IE if needed.	
• RSS feed: If your project is a blog or has articles, an RSS	link was provided.	
• Inline critical CSS: The inline critical CSS is correctly inje	ected in the HEAD.	
• CSS order: All CSS files are loaded before any JavaScrip	ot files in the HEAD

HTML

12 % HTML items are ✓

- **✓ HTML5 Semantic Elements:** HTML5 Semantic Elements are used appropriately (header, section, footer, main...).
- Error pages: Error 404 page and 5xx exist

•		Noopener: In case you are using external links with target="_blank", your link should have a rel="noopener" attribute to prevent tab nabbing. If you need to support older versions of Firefox, use rel="noopener noreferrer"
•		Clean up comments: Unnecessary code needs to be removed before sending the page to production.
•		W3C compliant: All pages need to be tested with the W3C validator to identify possible issues in the HTML code.
•		HTML Lint: I use tools to help me analyze any issues I could have on my HTML code.
•		Link checker: There are no broken links in my page, verify that you don't have any 404 error.
•		Adblockers test: Your website shows your content correctly with adblockers enabled
V	/E	BFONTS 0 % Webfonts items are ✓ Webfont format: WOFF, WOFF2 and TTF are supported by all modern browsers.
		Webfont size: Webfont sizes don't exceed 100 KB (all variants included).
		Webfont loader: Control loading behavior with a webfont loader.
_		Webiont loader. Control loading behavior with a webiont loader.
C	S	S 0 % CSS items are ✓
•		Responsive Web Design: The website is using responsive web design.
•		CSS Print: A print stylesheet is provided and is correct on each page.
•		Unique ID: If IDs are used, they are unique to a page.
•		Reset CSS: A CSS reset (reset, normalize or reboot) is used and up to date.
•		JS prefix: All classes (or id- used in JavaScript files) begin with js- and are not styled into the CSS files.
•		Embedded or inline CSS: Avoid at all cost embeding CSS in <style> tags or using inline CSS</th></tr><tr><th>•</th><th></th><th>Vendor prefixes: CSS vendor prefixes are used and are generated accordingly with your browser support compatibility.</th></tr><tr><th>•</th><th></th><th>Concatenation: CSS files are concatenated in a single file (Not for HTTP/2).</th></tr><tr><th>•</th><th></th><th>Minification: All CSS files are minified.</th></tr><tr><th>•</th><th></th><th>Non-blocking: CSS files need to be non-blocking to prevent the DOM from taking time to load.</th></tr><tr><th>•</th><th></th><th>Stylelint: All CSS or SCSS files are without any errors.</th></tr><tr><th>•</th><th></th><th>Responsive web design: All pages were tested with the correct breakpoints.</th></tr><tr><th>•</th><th></th><th>CSS Validator: The CSS was tested and pertinent errors were corrected.</th></tr><tr><th>•</th><th></th><th>Desktop Browsers: All pages were tested on all current desktop browsers (Safari, Firefox, Chrome, Internet Explorer, EDGE)</th></tr><tr><th>•</th><th></th><th>Mobile Browsers: All pages were tested on all current mobile browsers (Native browser, Chrome, Safari)</th></tr><tr><th>•</th><th></th><th>OS: All pages were tested on all current OS (Windows, Android, iOS, Mac)</th></tr><tr><th>•</th><th></th><th>Reading direction: All pages need to be tested for LTR and RTL languages if they need to be supported.</th></tr><tr><th>J</th><th>A۱</th><th>VASCRIPT 0 % JavaScript items are ✓</th></tr><tr><th>•</th><th></th><th>JavaScript Inline: You don't have any JavaScript code inline (mixed with your HTML code).</th></tr><tr><th>•</th><th></th><th>Concatenation: JavaScript files are concatenated.</th></tr><tr><th>•</th><th></th><th>Minification: JavaScript files are minified (you can add the .min suffix).</th></tr></tbody></table></style>

•		JavaScript security:
•		noscript tag: Use ` <noscript>` tag in the HTML body if a script type on the page is unsupported or if scripting is currently turned off in the browser. This will be helpful in client-side rendering heavy apps such as React.js.</noscript>
•		Non-blocking: JavaScript files are loaded asynchronously using async or deferred using defer attribute.
•		Modernizr: If you need to target some specific features you can use a custom Modernizr to add classes in your <html> tag.</html>
•		ESLint: No errors are flagged by ESLint (based on your configuration or standards rules).
I۱	/ 1/	AGES 0 % Images items are ✓
•		Optimization: All images are optimized to be rendered in the browser. WebP format could be used for critical pages (like Homepage)
•		Picture/Srcset: You use picture/srcset to provide the most appropriate image for the current viewport of the user.
•		Retina: You provide layout images 2x or 3x, support retina display.
•		Sprite: Small images are in a sprite file (in the case of icons, they can be in an SVG sprite image).
•		Width and Height: Set width and height attributes on if the final rendered image size is known (can be omitted for CSS sizing).
•		Alternative text: All have an alternative text which describe the image visually.
•		Lazy loading: Images are lazyloaded (A noscript fallback is always provided).
A	C	CESSIBILITY 0 % Accessibility items are ✓
•		Progressive enhancement: Major functionality like main navigation and search should work without JavaScript enabled.
•		
•		Color contrast: Color contrast should at least pass WCAG AA (AAA for mobile).
•		Color contrast: Color contrast should at least pass WCAG AA (AAA for mobile). H1: All pages have an H1 which is not the title of the website.
		H1: All pages have an H1 which is not the title of the website.
•		H1: All pages have an H1 which is not the title of the website. Headings: Headings should be used properly and in the right order (H1 to H6). Specific HTML5 input types are used: This is especially important for mobile devices that show customized keypads
